

FREEDOM TRAVEL OS

Handbook - RC Polish Sprint

Single source of truth for finishing Version 1.0 without endless small ZIP patches

Status	Goal	Workflow
RC Polish Sprint	Version 1.0 Ready	One Big Sprint

1. Mission

Freedom Travel OS helps the user manage every part of a trip - planning, flights, hotels, budget, packing, explore places, bookings, and trip readiness - through one premium offline-first personal travel app.

Version 1.0 release goal

- Premium enough to use daily for the August Korea trip.
- Reliable enough that the user does not need to keep debugging during busy work days.
- Focused enough to avoid endless feature creep before the trip.
- Documented enough that future updates can be done in bigger sprints instead of tiny patches.

2. Development Rules From Now On

- ☐ Feature freeze is active until Version 1.0. Only critical Korea-trip features may be added.
- ☐ No more tiny patch-by-patch ZIPs unless fixing a blocking bug.
- ☐ Every release must update docs before delivery.
- ☐ Every build must pass npm run build before release.
- ☐ Prefer one large, self-contained sprint over many small downloads.
- ☐ After Version 1.0, stop building and use the app. New ideas go into Version 1.1 backlog.

3. RC Polish Sprint Scope

Area	What to finish	Priority
Design System 2.0	Tokens, spacing, typography, cards, shadows, forms, buttons, navigation.	High

Motion System	Theme transition, page transition, cards, buttons, progress, bottom sheets, toasts.	High
UX Polish	Empty states, confirmation dialogs, safe-area, no FAB overlap, cleaner search.	High
Dashboard Command Centre	Trip Health Score, flight countdown, hotel, budget, packing, assistant cards.	High
Reliability	Form validation, local storage fallback, bug fixes, responsive checks.	High
Documentation	README, AI developer guide, project guide, changelog, version history.	High

4. Module Completion Tracker

Module	Status	Remaining	Decision
Journey / Dashboard	95%	Polish widgets, animate progress, ensure light/dark parity.	Polish only
Flight	98%	Tiny spacing QA only. Boarding pass style is locked.	Polish only
Hotel	96%	Final edit sheet polish and map/copy actions check.	Polish only
Explore	95%	Timeline separators, visited animation, search polish.	Polish only
Budget	94%	Toast feedback, modal spacing, settings completion.	Polish only
Packing	94%	Row height consistency, checklist feedback.	Polish only
More / Settings	96%	Theme choice persistence and clean settings hierarchy.	Polish only
Assistant	90%	Context-aware cards without adding complex AI dependency yet.	Polish only

5. Design System Reference

Theme colors

Token	Value	Usage
Light background	#F6FBFF	Shared app color token
Light surface	#FFFFFF	Shared app color token
Light accent	#2F6FDB	Shared app color token
Dark background	#09111D	Shared app color token
Dark surface	#172133	Shared app color token
Dark elevated	#202B3C	Shared app color token
Success	#20C997	Shared app color token

Warning	#F5B84B	Shared app color token
Danger	#E85D75	Shared app color token

Typography and spacing

- Page title: large, confident, consistent across modules.
- Section title: clearly smaller than page title.
- Card title: readable but not competing with section title.
- Labels: compact, uppercase only where useful.
- Spacing scale: 4, 8, 12, 16, 20, 24, 32. Avoid random one-off margins.
- Card radius: 24-28px. Buttons: 16-20px. Bottom sheets: 28-32px top radius.

6. Motion System Reference

- ☐ Theme switch: 250-300ms color fade.
- ☐ Button press: scale to 0.98 and release smoothly.
- ☐ Cards: fade in + slight upward movement on page entry.
- ☐ Progress bars/rings: animate from 0 to current value.
- ☐ Bottom sheet: slide up with soft spring feel.
- ☐ Toast: slide/fade in, auto-dismiss, no blocking alert unless destructive.
- ☐ Visited item: background fade + badge reveal + progress update animation.

7. Quality Gate Before Version 1.0

- ☐ npm install succeeds from clean folder.
- ☐ npm run build succeeds.
- ☐ npm run dev works using helper scripts on Windows.
- ☐ No PowerShell && issue documented in README.
- ☐ Light, Dark, and System theme all work.
- ☐ Theme preference persists after refresh.
- ☐ No content hidden under bottom navigation or FAB.
- ☐ All forms save to local storage correctly.
- ☐ Toasts appear after save/delete/complete actions.
- ☐ Empty states look intentional.
- ☐ Mobile width and desktop preview both usable.

☐ Docs updated: README, AI_DEVELOPER_GUIDE, PROJECT, CHANGELOG.

8. Release Candidate Test Script

1. Open app in Chrome after npm run dev.
2. Switch Light -> Dark -> System and refresh each time.
3. Journey: check Trip Health Score and dashboard widgets.
4. Flight: edit flight, save, refresh.
5. Hotel: edit hotel, save, copy/map actions where available.
6. Explore: search place, mark visited, verify progress.
7. Budget: add expense, edit settings, verify balance.
8. Packing: add item, check item, verify progress.
9. More: confirm settings and app info.
10. Run npm run build again before final ZIP.

9. Version 1.0 Definition of Done

- ☐ All core modules usable without developer help.
- ☐ User can test with one download, not repeated patches.
- ☐ No known blocking bugs.
- ☐ No ugly visual regressions from RC1.
- ☐ Light and dark themes both feel premium.
- ☐ Project can be used for August Korea trip preparation.
- ☐ After release, new features move to v1.1 backlog.

10. Version 1.1 Backlog - Do Not Build Before 1.0

- Weather integration
- Live exchange rate
- Flight tracking
- Offline maps
- Trip journal / memories
- Multi-trip support
- Cloud backup

- Photo/video workflow assistant
- AI travel assistant with live data

11. Developer Handoff Prompt

Use this prompt when continuing development:

Continue Freedom Travel OS from the latest RC build. Read docs/AI_DEVELOPER_GUIDE.md first, then docs/PROJECT.md, then this Handbook. Do not restart or redesign. Keep the premium light blue/white and dark navy design language. Feature freeze is active. Complete the RC Polish Sprint in one large release. Update all documentation before release. Build must pass npm run build. Deliver one complete ZIP only.
